Sustainable takaful fund with regular surplus distribution

## **Business Profile**

18

### **Takaful Considerations**

Competing in the same space as conventional insurers

Many Takaful entrants (new and existing) are finding it difficult to establish themselves

Fragmented markets with intense pricing pressure due to competition

Limited franchise and market position

Uncertainty of competitive advantage over conventional companies

**Limited product differentiation** 

Lack of skilled professionals

Developing a market profile is a key challenge

# Operating Performance

19

## **Takaful Considerations**

Understand the performance and balance of earnings between the shareholder and policyholder funds

Ability to generate surpluses in the policyholder fund (competition, pricing pressure, high Wakala fees)

**Dependence on Qard' Hasan** 

Investment profiles can be concentrated and lack diversification

Lower investment yield due to restrictive investment policy

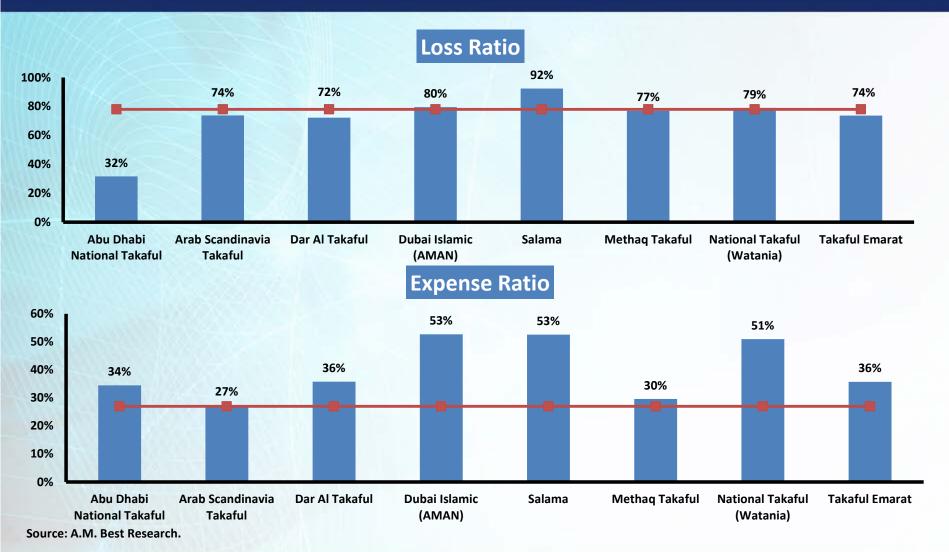

Over-dependence on investment income

Important to adopt a suitable model so that surpluses are created within the Takaful fund, with an appropriate fee structure

# UAE Market Review (5-year average)

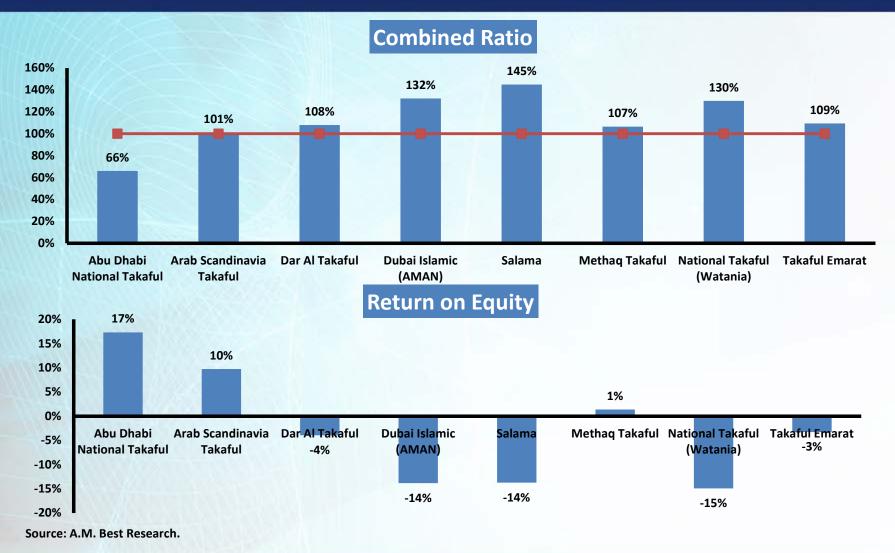

20

# UAE Market Review (5-year average)

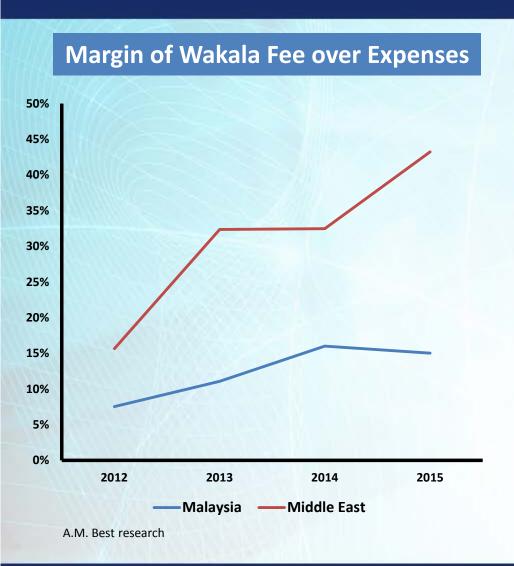

## Wakala Fees

22

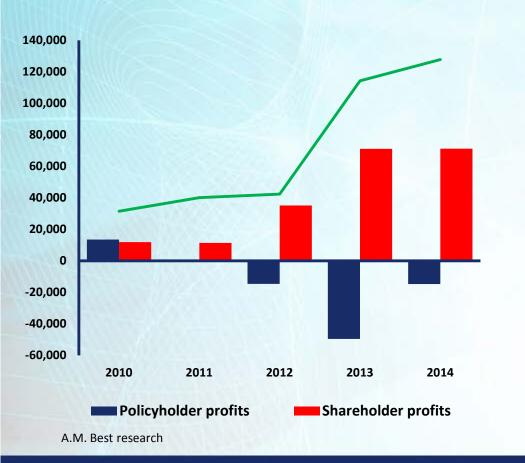

- Wakala fees more prudent in Malaysia over the Middle East
- Wakala fees should reflect expenses, plus the cost of capital
- Wakala fees can distort the actual underlying underwriting performance
- Growing divergence between
   Wakala fees and actual expense –
   excessive fees charged to
   policyholder funds
- High wakala fees create greater pressure on performance and higher dependence on Qard' Hasan

# Balance of Earnings

23

# Middle East: Balance of Earnings Between Shareholder and policyholder Funds

- Shareholder funds are generating profit whereas policyholder funds are in deficit
- Accumulated deficit of policyholder funds continues to rise
- Increasing dependence on Qard' Hasan

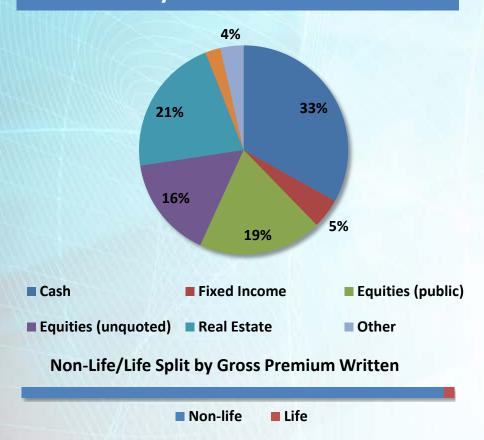

Suitable model and appropriate fee structure are critical to the sustainability of the model

# Investment Composition

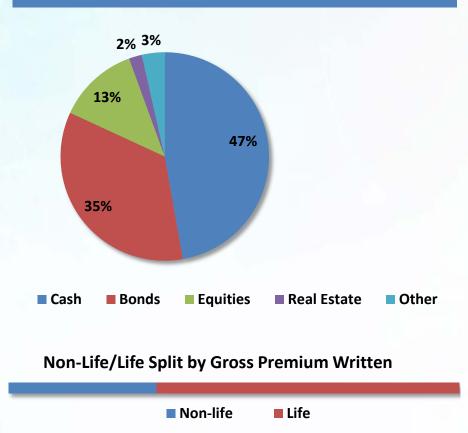

24

# Middle East Takaful Asset Distribution year-end 2015

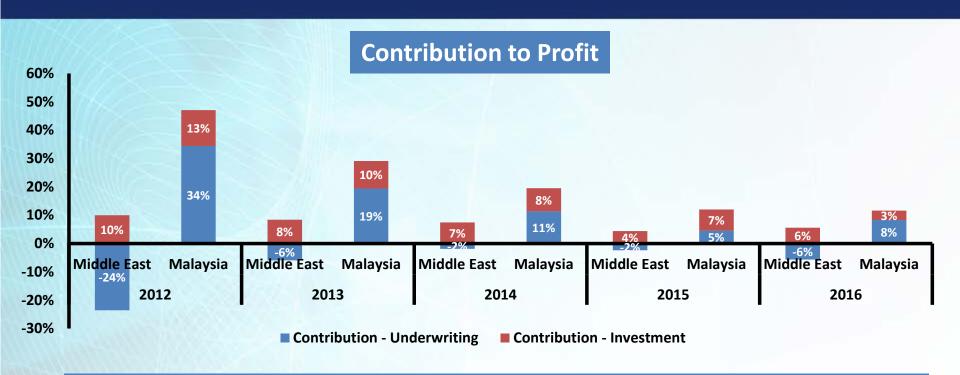

# Malaysia Takaful Asset Distribution year-end 2015

Source: Public Financial Data and A.M. Best Research

## Earnings Dependent on Investment Income

MENA: Weak technical performance highlights dependence on investment income

Malaysia: Underwriting performance is marginal; however earnings supplemented by steady investment income

Source: A.M. Best Research.

# Balance Sheet Strength

26

## **Takaful Considerations**

Strength of regulatory framework is a key component

- Commitment from shareholder fund to policyholder fund
- Permanence of Qard' Hasan
- Uniformity of regulation

Strength of Takaful fund can be limited due to:

- Low surplus accumulation
- High wakala fees charged to Takaful fund
- Over dependence on Qard' Hasan to cover deficit

**Insufficient Retakaful capacity** 

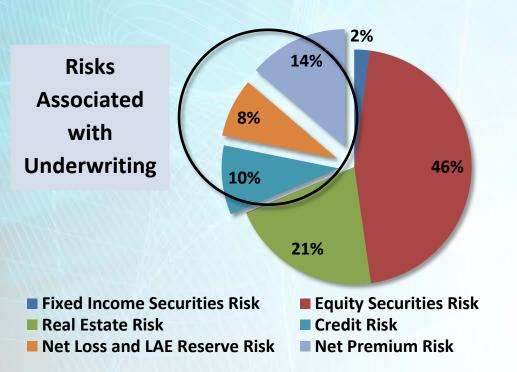

**Unleveraged balance sheets** 

Adequacy of loss reserves

# Capital Requirements

Best's Capital Adequacy Ratio
Sources of Risk to MENA Takaful Operators
(excludes Saudi Cooperatives)

Source: Public Financial Data and A.M. Best Research incorporating the BCAR model. Risk is represented as Gross Required Capital in the BCAR model.

- New operators with insufficient scale
- Policyholder fund assumes underwriting risk
- Shareholder fund assumes investment risk
- Investment profile create volatility in risk-adjusted capitalisation.
- Capital buffers required to absorb fluctuations in asset prices
- Malaysian operators have more balanced risk profiles

27

## Saudi Market

28

# "Enterprise" Risk Management

30

## A few questions...

What are the main risks or threats to a company?

How does a company control and mitigate risks effectively?

How embedded is Enterprise Risk Management (ERM) throughout the organisation?

How has ERM assisted in decision making?

Risk Management capability should be viewed relative to a company's risk profile

# "Enterprise" Risk Management

31

### A few observations...

Given the added complexity of Takaful companies; ERM plays an important role within companies; particularly to gain a competitive advantage over peers

Corporate governance is important, particularly for start-up Takaful companies, given the higher level of execution risks

Companies tend to manage risk on a silo basis. Further integration is required to reach 'enterprise-wide' risk management

Risk management is only valuable if it is conducted by company management to protect and strengthen the key fundamentals of the company, and not meet requirements of outside parties

# The Right Balance

32

Balancing growth and profitability is a key challenge

Growth **Profitability** The Right **Balance Financial Stability** 

### **Takaful**

- New formations pre-financial crisis
- High exposure to volatile asset classes
- Fierce market competition
- Limited differentiation
- Desire for market share

### Growth

- Is growth important for insurers?
- Is it sensible to grow in the current economic environment?
- Are there any opportunities to grow?

Aggressive growth in tough market conditions can lead to weaker credit quality

# Catalysts for Future Growth

33

## Sustainability of Takaful model - Value Added Proposition

### **Distribution**

Access to business

## Demonstrate the 'value added benefit' of the Takaful model:

- Emphasise mutuality: alignment of interests between shareholders and policyholders
- Appropriate balance of earnings between shareholders and policyholders
- Wakala fees closely reflect actual expenses
- Lower dependence on Qard' Hasan
- Evidence of surplus distribution

## Developments of Shari'a compliant investment markets

- Greater investment opportunities
- Reduced concentration risk

## Regulation

- Uniformity across markets
- Improved transparency
- Actively police the market

Demonstrating the financial health of Takaful operators

**Quality of Management**
